### **Abstract**

Therefore, it is important for service companies to set high standards in determining good service quality. Because services are intangible, it is difficult to evaluate the quality of the service so consumers must consume the service first, who can then assess the quality of a service. Service is an effort to serve other people's needs, while serving is helping to prepare (helping someone with what they need). In essence, service is a series of activities which constitute a process. Based on previous research which has the same research by previous researchers, based on measurement results using the service quality method, consumers are not satisfied with the service quality of package delivery services.

**Keywords: service, quality, delivery.**

### **INTRODUCTION**

Because services are intangible, it is difficult to evaluate the quality of the service so consumers must consume the service first, who can then assess the quality of a service. Therefore, it is important for service companies to set high standards in determining good service quality. Because services are intangible, it is difficult to evaluate the quality of the service so consumers must consume the service first, who can then assess the quality of a service. Therefore, it is important for service companies to set high standards in determining good service quality.

### **METHOD**

Service quality has five main dimensions used by consumers in evaluating a service, these five dimensions consist of Tangibles, Reliability (reliable and accurate performance), Responsiveness (fast and helpful), Assurance (credibility, security, competence, and politeness), and Empathy (easy access, good communication, and customer understanding). And later, from this research, the company must correct errors that are the main problem and are important to change, both in terms of facilities and existing human resources. This research will be accompanied by solutions on how to improve the quality of service.

### **RESULT AND DISCUSSION**

Service is an effort to serve other people's needs, while serving is helping to prepare (helping someone with what they need). In essence, service is a series of activities which constitute a process. As a service process that takes place routinely and continuously, covering all the lives of people in society, the process of fulfilling needs through the activities of other people. According to previous researchers, service is an activity organized by an organization regarding the needs of consumers and will create a special impression.

## CONCLUSION

Based on previous research which has the same research by previous researchers, based on measurement results using the service quality method, consumers are not satisfied with the service quality of package delivery services. Meanwhile, based on research in the hospitality sector, the quality of hotel service is quite good but service must also be improved. Meanwhile research on service quality at the Department of Population and Civil Registration has resulted in several criteria needing to be improved so that the service received by customers can be in line with expectations.
